

MORTGAGE & STRUCTURED PRODUCTS TRADER

Rates amplify policy risks for pools

MBS: High mortgage rates amplify policy risks for non-loan balance specified pools

- Higher mortgage rates and weaker prepayments have reduced demand for prepayment protection, driving payups lower and favoring TBAs in the near term.
- Mid-sized loan balance pools (\$175k–\$275k) could offer more resilient payups in a high-rate environment, while the broader specified pool universe looks less compelling near term.
- NY, low FICO, and FL pools face structural and policy risks (extension profile, VantageScore migration, potential future refinance tax changes) that could pressure payups further.

RMBS: Lining up for HELOCs

- There has been notable variation in collateral and loan structure across HELOC RMBS deals in recent years. We find that, during the draw period, floating rate deals outperform fixed rate deals, likely due to lower monthly payment obligations.
- GWACs, FICO scores, loan seasoning, lien status, and program type are key drivers of HELOC delinquencies.
- We believe AAA-rated floating rate tranches are attractive and benefit from less extension risk than fixed rate deals.

ABS: Under the surface of consumer unsecured ABS delinquencies

- Consumer unsecured ABS delinquencies have been declining since 2024, stemming from comparatively stricter underwriting standards. To this point, the 2025 vintage exhibits one of the flattest delinquency ramps in recent history.
- Early indications show that heightened fuel costs have not materially impacted delinquencies. However, persistent economic stress can eventually pressure the consumer.
- We remain overweight consumer unsecured vs. subprime auto and continue to encourage careful issuer tiering.

Agency MBS

Persistently elevated mortgage rates amplify policy risk for non-loan balance specified pool stories

The steady back-up in mortgage rates and downside prepay surprises over the past two months have dampened investor appetite to pay for prepayment protection by owning pools with favorable collateral characteristics (i.e., specified pools). For a detailed review of trends in the May prepayment report, please refer to our [commentary](#) published earlier today. Changes in mortgage rates (and hence prepay concerns) are one of the most important drivers of specified pool payups (defined as the price difference between the specified pool and TBA). After steadily rising during 2H'2025, specified pool payups have been on a declining trend in recent months (Exhibit 1). In the near term, given the diminished prepayment concerns, we continue to prefer owning TBAs over paying up for specified pools. Owning specified pools may still be more attractive from a long-term perspective due to the worsening convexity profile of TBA (rising loan sizes, risk of AI streamlining the mortgage origination process, etc.). An extended period of high mortgage rates may provide a better entry point for investors to accumulate pools for their long-term portfolios. Within the specified pool universe, we find the greatest value in the middle of the loan balance spectrum (\$175k-\$275k max pools), as loan balance pools are more likely to retain their payups in a high mortgage rate environment relative to the non-loan balance or credit stories (Exhibit 2).

Exhibit 1: Specified pool payups have drifted lower in recent months as mortgage rates have moved higher and prepayment risk subsides

Prepays for newly issued 250k max and 300k max FN 5.5s loan balance specified pools

Source: Goldman Sachs FICC & Equities, Bloomberg, Goldman Sachs Global Investment Research

Exhibit 2: Compared to early September, when mortgage rates were about the same as they are now, payups for loan balance and NY pools are higher, while payups for several other categories remain unchanged or are slightly lower

Prepays for newly issued 250k max and 300k max FN 5.5s loan balance specified pools

Source: Goldman Sachs FICC & Equities, Bloomberg, Goldman Sachs Global Investment Research

On the other hand, certain non-loan balance specified pool stories may provide less prepay protection to begin with and could be subject to greater policy risk as well. Below, we highlight downside risks to payups for three such stories—NY 5.5s, low FICO, and FL pools.

First, NY pools do not offer any extension protection as mortgage rates back-up (Exhibit 3). While NY prepays are comparable to 175k max when loans have moderate refinance incentive, they prepay much slower when there is no refinance incentive. Payups for NY 5.5s remain comparable to that of 175k max pools. If mortgage rates remain elevated

around current levels, we believe NY 5.5s pools would not be attractive for specified pool investors. However, NY 5.5s payups could still be supported if there is continued strong demand from CMO derivative investors, as they may find the prepay profile suitable, although valuations of such CMO derivatives have richened as well.

Exhibit 3: NY loans prepay slower than TBA as discounts and hence do not offer any extension protection

S-curves for 12-24 WALA 30-year FN/FH loans

Source: eMBS, Goldman Sachs Global Investment Research

Second, low FICO pools are trading in line with 300k max loan balance pools, while the prepays are closest to 350k max pools (Exhibit 4). In addition, we believe the payups do not account for the risk of a rapid change in the credit scoring landscape. FHFA and the GSEs approved the use of VantageScore 4.0 (VS4) on April 22nd. Although the volume of VS4 loans delivered into the GSEs is very small so far (just over \$75 million to date), the usage of VS4 could increase as more lenders make the necessary process adjustments in the coming months. Low FICO pools face the greatest downside risk to payups due to the significant dispersion between VS4 and classic FICO scores. VS4 loans securitized to date are primarily originated by United Wholesale Mortgage and New Residential Mortgage, however other large lenders like Rocket have announced plans to make VS4 available to their borrowers.

Exhibit 4: S-curves for low FICO loans are generally comparable to that for 300k max loan balance pools

S-curves for 12-24 WALA 30-year FN/FH loans

Source: eMBS, Goldman Sachs Global Investment Research

Third, there is a risk that the prepay protection offered by FL pools erodes, similar to the erosion observed for TX pools (Exhibit 5). Recently, market participants have been

focused on a ruling by the Florida *appellate court* that restricts the application of refinance taxes to specific cases where the magnitude of debt balances increase or if the loan is refinanced through a different servicer. We believe another risk to FL prepaids is that refinance tax could be eventually eliminated completely. Currently, FL Governor DeSantis has introduced a proposal that aims to lower the tax assessment value of homes in FL, which could result in a significant decline in property taxes over time. If similar steps are taken to remove refinance taxes, they could be very popular as well.

Exhibit 5: Texas pools offer very little prepayment protection currently

RMBS

Lining up for HELOCs: smaller GWACs and lower payment risk boost performance

RMBS deal issuance backed by home equity lines of credit (HELOC) has increased in recent years, with current year-to-date issuance broadly tracking last year's levels (Exhibit 6). As we highlighted in a prior note, the renewed interest in HELOC securitization post-GFC is likely a function of both increased HELOC usage by homeowners and greater demand from investors in the securitization market. Fundamentally, a HELOC functions as a revolving line of credit, like a credit card, where homeowners are approved for a specific credit limit and can draw funds as needed during a set period (the "draw period") that is followed by, or coinciding with, a payment schedule. The underlying loan maturities vary, although most of the deals carry an average term of 25-30 years. Generally, the loans backing these deals require a large drawdown (75-100%) at loan closing and have a draw period commonly around five years (although it can be as short as one year). During this period, servicers are responsible for funding subsequent draws, with the draws usually increasing the principal balance of the deal. In contrast to closed-end second lien (CES) deals, HELOC deals do not usually have a rate step-up period, leaving the fixed-rate HELOC deals more susceptible to extension risk.

Exhibit 6: YTD HELOC issuance is roughly on track to match 2025 volumes

Source: Intex, Goldman Sachs Global Investment Research

Deal structures vary broadly by collateral and rate type: Amongst the larger HELOC issuers in recent years, we find that there is notable variation in collateral across HELOC deals/issuers (Exhibit 7). While most issuers tend to issue deals with fairly homogenous collateral, FIGRE and GRADE have greater dispersion in collateral characteristics across deals (with the collateral usually identified in the deal name). Most issuers also generally operate either a fixed-rate or floating-rate HELOC product. This choice is important, as floating-rate deals generally require interest-only (IO) payments during the draw period, whereas fixed-rate deals will require the payment of principal and interest (P&I). As a result, floating-rate borrowers may face less payment risk in the initial years due to their relatively lower payment obligation during the draw period.

Exhibit 7: Deal structures vary broadly by collateral and rate type

Average characteristics for 2024-2025 deal vintages. Deals with unavailable characteristics did not issue in those respective years.

Shelf	Collateral Identifier	Collateral	Rate Type	WAC (%)	FICO	CLTV (%)	Utilization (%)	WALA (months)
ACHM	HE	First/Second Lien HELOCs	Fixed	12.23	711	68.5	98.6	3

	HB	First/Second Lien HELOCs, originated by HOMEBRIDGE	Floating	-	-	-	-	-
TPMT	HE	First/Second Lien HELOCs	Floating	10.07	757	69.9	91.6	11
	FIX	First/Second Lien HELOCs	Fixed	9.53	746	69.6	93.7	10

Note: Table covers the following issuers (shelves): Achieve (ACHM); Angel Oak Mortgage Trust (AOMT); Figure Trust (FIGRE); J.P. Morgan Mortgage Trust (JPMMT); Onslow Bay (OBX); Saluda Grade Alternative Mortgage Trust (GRADE); and Towd Point Mortgage Trust (TPMT).

Source: Intex, Goldman Sachs Global Investment Research

Floating rate loans outperform during the draw period due to lower dollar amount of payments: Exhibit 8 summarizes the delinquency ramps across issuers and tiers them by fixed vs. floating rate collateral. Across the more 'standard' HELOC deals, deals with floating-rate collateral generally outperform deals with fixed-rate HELOCs, at least in the

initial years (during the draw period). Within FIGRE's fixed-rate deals, we see that deals backed by seasoned loans and first lien HELOCs outperform the typical new issue second lien HELOCs (Exhibit 9). For GRADE, their deals backed by both HELOCs and CES exhibit initial weaker performance against the standard fixed-rate HELOCs. In addition to interest rate type and loan seasoning, other factors such as GWAC, FICO and the program/type of borrowers are also significant drivers of performance. For instance, there is a positive correlation between higher GWAC and higher delinquencies (Exhibit 10). Within fixed-rate HELOCs, ACHM deals underperform likely due to their lower FICO. Overall, we find that among recent issuance, TPMT and JPMMT deals have typically outperformed.

Exhibit 8: Floating rate deals outperform fixed-rate deals, likely due to lower payments during draw periods

D90+ by deal vintage, rate type, issuer, and months since deal issuance; deals are restricted to the following shelves + collateral identifier: ACHM-HE, AOMT-HB, FIGRE-HE, JPMMT-HE, OBX-HE, GRADE-LOC, TPMT-HE, and TPMT-FIX

Exhibit 9: Within issuer, performance varies by deal collateral type

D90+ by deal vintage, issuer, collateral identifier, and months since deal issuance; fixed-rate deals only

Source: Intex, Goldman Sachs Global Investment Research

Exhibit 10: Higher GWACs are associated with higher realized delinquencies

2024 vintage only. D90+ is as of the 18th month post deal-issuance. Excluding deals with seasoned loans and deals with CES collateral; trendline and R-squared corresponds to all points excluding ACHM deals

Source: Intex, Goldman Sachs Global Investment Research

TPMT deals typically exhibit more favorable performance and trade at attractive spreads, relative to other issuers: New issue spreads generally appear to reflect shelf performance (Exhibit 11). Across floating-rate deals, AAA-rated tranches of JPMMT and

TPMT deals have priced the tightest recently. Between the two, TPMT trades about 10bp wider, despite similar, if not marginally better, performance and collateral characteristics (again, Exhibits 7 and 8). A factor that may be contributing to JPMMT trading tighter is a seemingly unique feature of their deals in that draws following loan-closing will be funded in new deals rather than within the current deal. Investors concerned about delays to amortization may find this feature more valuable. That said, across fixed rate deals, we find that TPMT deals trade roughly in line with FIGRE deals despite better delinquency ramps (again, Exhibit 8). In general, it appears that TPMT deals, irrespective of rate type, offer a spread pick-up compared to the similarly-performing floating-rate JPMMT deals and outperform fixed-rate FIGRE at similar spreads.

Exhibit 11: TPMT provides a spread pickup compared to floating-rate JPMMT deals and outperforms fixed-rate FIGRE at similar spreads

ABS

Looking beneath the surface in consumer unsecured ABS delinquencies

The headline delinquency rate in consumer unsecured ABS has been steadily declining since its local peak in March of 2024 (Exhibit 12). This drop in delinquencies may seem counterintuitive when several other consumer ABS sectors are reporting increasing delinquency rates. Even prime auto ABS have seen their serious delinquency rate drift upwards over the past two years despite the robust credit quality of borrowers underlying the sector.

Exhibit 12: Delinquency rates on the consumer unsecured ABS (in aggregate) have been declining over the past two years, while several other sectors have seen delinquencies trend higher

Trailing twelve month average D90+ rate across ABS sectors

Source: Intex, Goldman Sachs Global Investment Research

What then is driving the falling delinquencies in the consumer unsecured ABS market? Rolling default rates have been decreasing over the same period delinquencies have (Exhibit 13), largely eliminating the possibility that falling delinquencies are purely a result of a large wave of chargeoffs “cleaning up” the delinquency rate. Nor has the delinquency rate on older vintages decreased (Exhibit 14). We believe it largely has to do with the better performance reported by the newer vintages and their higher weighting in the universe. The better performance of newer vintages is likely the result of tightening underwriting standards in 2023-24 (Exhibit 15). Newer vintages are set to outperform older vintages with 2025 vintage reporting some of the flattest delinquency ramps in recent history, beaten only by the 2018 and 2020 vintages. Helping contribute to the improved performance of newer vintages, Sofi, an issuer known for focusing on the super prime consumer credit bucket, has been the second largest issuer in the 2025 and 2026 vintages (we estimate that over half of the market is made up of issuers who focus on the “near prime” consumer credit bucket). Furthermore, due to the short loan lifespans combined with high prepay speeds, it is normal for the universe to turn over very quickly. As a result, the 2025 vintage is the single largest driver of the headline delinquency rate currently (Exhibit 16).

Exhibit 13: 3-Month CDR's have declined during the same period as delinquencies

3-month average CDR for the consumer unsecured universe

Source: Intex, Goldman Sachs Global Investment Research

Exhibit 14: Older vintages have not seen a decrease in their delinquency rates, but newer vintages are reporting flatter delinquency ramps

Exhibit 16: Due to short lived loans and high prepay speeds, the market turnover in consumer unsecured is rapid and aggregate delinquencies are driven by the performance of the most recent vintages

Share of delinquency rate driven by each vintage over time

Source: Intex, Goldman Sachs Global Investment Research

Consumer unsecured ABS may face growing delinquencies in the coming months if lower real wage growth, rising inflation, and high fuel prices affect consumers. While additional pressure to the consumers financial health is unwelcome, it is unlikely that heightened fuel costs will immediately impact delinquency rates within ABS products. So far, this view has played out within the consumer unsecured sector. With two months of delinquency data in the books since the start of the Iran conflict, D30+ rates are largely staying on trend. We are cognizant that, the longer the conflict continues, the more likely it is that higher energy costs could dampen broader economic conditions, which could in turn pressure delinquency rates for the sector.

We remain overweight this sector vs. subprime auto; however, we reiterate our view that not all collateral pools of an equal credit score are created equal. For instance, the relatively recently issued RCKTL 2025-1 has a weighted average credit score of 741, well into prime territory, but has been underperforming other issuers with similar credit scores and longer performance histories. RCKTL 2025-1 has accumulated more than double the cumulative net loss, and is currently reporting a D90+ rate 1.5 times that of a peer deal with a weighted average credit score of 744. We urge careful issuer tiering for investors in the sector.

The authors would like to thank Patricia Pacheco for her contribution to this report.

Relative Value Views

Exhibit 18: Relative value views

Relative Value views by sector		
Agency MBS and CMBS	MBS Basis	Neutral: Spreads are likely to move sideways near-term as support from GSE backstop will be offset by seasonal increase in supply from originators. Convexity selling can drive underperformance in further rate back-up scenario. Longer-term: Spreads likely to end the year wider than YTD average as market focus shifts to 2027 supply-demand technicals and the lack of smaller GSE backstop.
	Coupon stack	Prefer FN 5.0s. Premium coupons (FN 6.0s-6.5s) are trading tighter vs. March wides and have greater extension risk.
	Specified pools	TBAs likely to outperform pools near-term, although specified pools could outperform longer-term due to worsening convexity profile of TBA and scarcity value from GSE retention. Prefer middle loan-balance (175k-275k) stories as they are most insulated from prepay/policy risks.
	GNs	Modest underweight: Seasonals could boost GN supply more than conventional supply.
	CMO floaters	DMs in line with March wides for 6.0% and 6.5% cap floaters should provide an opportunity to own floating rate exposure.
	Agency CMBS	Spreads likely to hold steady near-term on healthy demand for asset swap into uncapped floaters, although expect modest widening pressure during 2H due to supply seasonals
	Agency MBS vs. IG	Prefer MBS vs IG: MBS offers attractive diversification benefits
Non- agency RMBS	Non-QM	Overweight non-QM AAAs vs MBS basis: Expect spread differentials to narrow to around 5-10bp, driven by better convexity profile and strong investor demand for non-QM. Prefer up-in-quality exposure: BB and B credit curve is extremely flat.
	Prime Jumbo	Offers wider spreads vs higher coupons TBAs, should outperform TBAs in a rate back-up scenario.
	CES	We prefer CES AAAs vs non-QM AAA, and expect CES spreads to trade tighter than non-QM due to its more favorable convexity profile.
	RPL	Neutral RPL AAAs, as spreads are comparable to non-QM. RPLs are attractive in a rate rally scenario due to its favorable convexity profile
ABS	Prime Auto	Neutral: Spreads are largely insulated from geopolitical and commodities induced volatility, and outperform during such events. The BBB tranches offer compelling spreads with thick enough credit enhancement.
	Subprime Auto	Underweight at a sector level: High interest rates and inflated auto prices have increased delinquencies and losses. We advocate an up-in-quality positioning with careful manager selection.
	Consumer Unsecured	Overweight vs subprime auto: Heavy fintech participation and alternative underwriting differentiate the sector. We favor the middle to higher-rated tranches (AA, A, BBB)
	Home Improvement	Overweight vs. consumer unsecured: Home improvement bonds have historically priced similarly to consumer unsecured deals while reporting significantly better collateral performance.
	Solar	Underweight the sector on performance concerns. We prefer solar lease deals over solar loans.
	Aircraft	Overweight aircraft ABS relative to subprime auto ABS at the A-rated tranches. Strong travel demand and favorable supply and demand imbalances keep aircraft valuations well supported.
	Digital infrastructure ABS/CMBS	Neutral at a sector level. In general, prefer hyperscaler exposure. Datacenter ABS: Among the widest A-rated spread in ABS, with wide dispersion across trusts. We favor trusts with long track record, high DSCRs and long lease terms. Fiber ABS: Less exposed to AI risk, lower dispersion across issuers - trades tighter than datacenter ABS. Datacenter CMBS: Wider spreads vs. datacenter ABS, although smaller market and less diversification. Diversification is the best way to hedge maturity default risk.

Disclosure Appendix

Reg AC

We, Arun Manohar, Ben Shumway and Neth Karunamuni, hereby certify that all of the views expressed in this report accurately reflect our personal views, which have not been influenced by considerations of the firm's business or client relationships.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Contributing Authors: Arun Manohar Goldman Sachs & Co. LLC, Ben Shumway Goldman Sachs & Co. LLC, Neth Karunamuni Goldman Sachs & Co. LLC.

Unless otherwise stated, the individuals listed in the Contributing Authors disclosure of this report are analysts in Goldman Sachs' Global Investment Research division.

Disclosures

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: _____. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at _____. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Investment in securities market are subject to market risks. Read all the related documents carefully before investing. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details can be found at: _____, and a copy of the annual audit

compliance report can be found at this link: _____. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: _____.

Russia: Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered

companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at _____ which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (_____).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is focused on investment themes across markets, industries and sectors. It does not attempt to distinguish between the prospects or performance of, or provide analysis of, individual companies within any industry or sector we describe.

Any trading recommendation in this research relating to an equity or credit security or securities within an industry or sector is reflective of the investment theme being discussed and is not a recommendation of any such security in isolation.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at _____ and _____. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g.,

marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to _____.

Disclosure information is also available at _____ or from Research Compliance, 200 West Street, New York, NY 10282.
